

## TLOS DOWNHOLE MOTORS

### Motor Parts and Accessories

We offer a complete line of motor accessories and components to provide optimum performance. We also provide parts and assemblies for use with other manufacturers power sections and lower assemblies. Whether you need components to support a specific applications or have an existing motor fleet you want to keep in operation, **TLOS** has the parts you need. Here are just a few example of parts and components we offer:

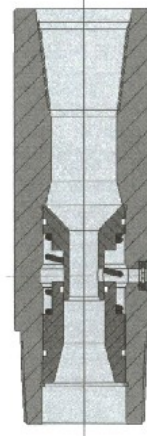

#### Power Sections:

The heart of the drilling motor is the power section. The power section, as the name implies, provides the rotational power to the drill bit. A power section can be configured from a single lobe 1:2 up to a multi-lobe 10:11 configuration (depending on size). As the number of lobes increase, the output torque increases while the output speed decreases. At **TLOS**, we provide power sections with a lobe configuration to achieve the desired performance requirements for your application.

#### Motors Accessories:

We have several components that can be added to a drilling motor. These include upper stabilizers, lower fixed and screw-on stabilizers, top dump valves, orienting subs, crossover subs, and positioning subs.

#### Replacement Parts:

From radial bearing to ball drive couplings. We offer a complete line of replacement parts and assemblies. Have an existing motor fleet? We provide replacement parts to help keep your motors running at peak performance.
